## ASHLAND GRADING SYSTEM GUIDE

The lots described in this catalog have been carefully examined and valued by Ashland's experts and watch makers, taking into consideration the aesthetic, historical and technical interest, age and rarity, as well as the technology available at the time of production of each timepiece.

For such judgment to be as objective as possible, it must rest on a number of criteria, particularly with regards to the age of a lot. Indeed, a wrist watch of less than 50 years old cannot be judged with the same criteria as a Renaissance watch. This is the reason why some of the gradings will only qualify for certain types of watches and will never be used for others.

For example, if, as a general rule, watches can be attributed gradings from 1 to 4 for the case, the dial and the movement, watches of less than 100 years old can be given grading 1 (as new), 3 (in very good condition), or 4 (in good condition). The latter, (grading 4), will be followed by one or more grading numbers to justify why the lot cannot be considered "in very good condition". On the other hand, watches over 100 years old, of similar condition, would indeed be considered as "very good" because of their age and would therefore qualify for grading 3. Needless to say, watches over 100 years old, even the best state of conservation for their age, are unlikely to ever be considered "as new" and would therefore never be eligible for grading 1; for this reason, we have introduced grading 2 (in perfect condition).

At the end of each lot description, before the description, you will find a condition report box, with letters and numbers, divided into 4 sections: these are the grades given to the lot with reference to the condition of its case, its dial and hands, its movement, and its rarity level-if applicable.

To understand the grades shown in the condition report box, consult the Grading System as follows:

**C** for the case, followed by one or more numbers = condition of case.

**D** for the dial (& hands), followed by one or more numbers = condition of dial & hands.

**M** for the movement, followed by one or more numbers = condition of movement.

Next to this condition report box, is an experts rarity box featuring one number from 1-10 as an overall rarity grade.

See example below:

## GUIDE TO GRADING

1 : as new	2 : in perfect condition	3 : very good	4 : good	5 : fair
------------	--------------------------	---------------	----------	----------

C CASE	ENAMEL AND VARIOUS TYPES OF DECORATION	D DIAL (cont.)	HANDS	RARITY GRADE
<b>DETAILS</b>				
6 patinated	54 very worn	25 partly rubbed	01 original	A select group of watches in this catalog have been assigned a "rarity grade" which will appear in the description heading. The total production number of U.S. made pocket watches and vintage wrist watches are fairly well known and accessible, unlike the large and more varied output of European makers and of early horological examples. Therefore, this simplified 1 thru 10 numerical grade is designed to assist collectors and investors in determining the scarcity of a given timepiece in today's market (#1 is considered common to #10, which is an extremely rare item). The following factors are the basis of assigned rarity levels: (c) Historical importance. (d) Condition in relationship to other examples of similar type. (e) Artistic case design, I.e. enamel, unusual shape or form pieces. (f) Low survival rate of similar types. (g) Investment potential for increase indemand and price. A rarity grade will be assigned to highlight items which offer strong investment potential (generally items of level 5 thru 10).
